

PROOF OF EXISTENCE CERTIFICATE

parquet-en-mal-estado.webp

REGISTERED IN SELLAT ON

14 SEP 2026

08:25:40 UTC

This certificate attests that the file with the SHA-256 fingerprint below existed exactly as it is at the moment recorded. Any change to the file, however small, produces a different fingerprint.

The original file was not uploaded to Sellat: only its SHA-256 fingerprint, calculated on the device, was registered.

VERIFY ANYTIME

PUBLIC ANCHORS

Polygon Mainnet · transaction sent to the network

0xe2bbc746c7d32967affbadbd612280e5ec67a853951ecf1fbc1fb05aeeb61447

Status at the time of issue. The up-to-date status is on the certificate page.

Bitcoin (OpenTimestamps) · confirmed at block 966942

.ots proof and Merkle path in your proof package and on the certificate page.

Qualified (eIDAS) timestamp · FNMT-RCM · issued on 14 SEP 2026 08:25:47 UTC

Serial 0B59D38532AB7D856AA7AF8B8122FF51. Legal presumption of date and integrity (EU Regulation 910/2014). Verifiable with any RFC 3161 tool against the EU trusted list; download the timestamp (.tsr) on the certificate page.

HOW TO CHECK IT

1. Open the certificate page (QR or link) and upload the original file at sellat.app/verify: if the fingerprint matches, it is the same file, byte for byte.
2. The Polygon Mainnet transaction above can be looked up in any public explorer: its data carries, as text, this certificate ID and this same fingerprint.
3. Without Sellat: verify the proof.json in your proof ZIP with [sellat-verify](https://github.com/skanthemore/sellat-verify) (github.com/skanthemore/sellat-verify). There the anchor is a batch Merkle root and proof.json carries the path up to your fingerprint.
